### WHO WE ARE?

Niketan / DRRA is an innovative care organization with a focus on care and support for every child, for every disability, for every parent. We focus on provision of high-quality care and inclusion.

The staff of the carpentry center have their own limitations. However, they are well trained and skilled at producing assistive devices for children with special needs. The devices are made from locally sourced materials. We believe the devices to be a meaningful asset to the inclusion and development of children with special needs.

### FOR WHOM WE MAKE DEVICES?

- Children with:
- cerebral palsy
- developmental delay
- spina bifida
- spinal cord injury
- low muscle tone

### WHY?

*Thousands of children with cerebral palsy or other muscle related disabilities spend their days hidden from view. They cannot attend school, they do not get the possibility to play with friends or to develop themselves. Niketan / DRRA is committed to remove barriers for people with disabilities and give them equal opportunities in society.*

# PRONE STANDING FRAME

## ADVANTAGES

- very easy to assemble,
- easy to adjust for each child individually,
- soft and comfortable bolsters,
- colorful and pleasant to look at which invites the child to stand in it and play,
- locally produced.

## THE EARLIER YOU START THE BETTER

Positioning a child with special needs in an upright, standing position is a step to facilitate bone and muscle development and maintaining range of motion. It also encourages better function of the internal systems. Finally communication between the child and its surroundings greatly improves.

## BENEFITS

*The prone standing frame helps the child to strengthen his muscles, it stimulates the senses and improves the physical development. It also gives a new perception of the world and improves social skills. This prepares the child for transition to less restrictive activities.*

## HOW TO USE?

- The standing frame can be used in two prone positions.
- The frame can and must be adjusted to fit each child individually.
- The child must be comfortable in the frame.
- After a period of getting used to the vertical position, the child may stand for approximately an hour a day.
- The child should never be left alone in the frame.
- The child in the standing frame should participate in play, learning activities and social interaction.
